Support Letter for Dutch VIDI Proposal "Magna Data"

Dear Alexandru Iosup,

you informed me about your my upcoming Dutch VIDI proposal, "MagnaData: all data-services for all people" and the details about the activity. It is my pleasure to support you in your proposal. I would also be available to help on the advisory board if necessary,

The presented topic tackles a crucial are of general interest. Data is key to scientific and economic innovation; as such, a novel resource management that combines the different requirements is very helpful. Your past scientific work brings you into a unique position to address this problem by linking our work on scheduling and resource management with the specific questions of handling data. A novel approach that simplifies data management and analytics would make these technologies accessible and usable for a broader number of users.

I am happy to support you in this endeavor. As you know, GWDG is an IT competence centre for the University of Goettingen and the Max Planck Society. We offer services and perform research to develop novel solutions for the scientific community. In this role, high performance computing as well as research data management is of crucial importance. We can contribute to your work with access to our use cases as well as our expertise in this area.

Sincerely,

Prof. Dr. Ing. Ramin Yahyapour

Managing Director GWDG
CIO Universität Göttingen und Universitätsmedizin Göttingen
